Education

Chameli Devi Group of Institutions (CDGI) Indore, MP
B.Tech in Computer Science & Information Technology, RGPV University, CGPA: 7.56 Sept 2023 – Present

Technical Skills

Languages: Python, SQL, HTML, CSS, JavaScript, React, TypeScript, Node.js
Machine Learning & Deep Learning: Predictive Modelling, CNN, RNN, LSTM, Transformers, NLP, Computer Vision, OCR, OpenCV
Frameworks & Libraries: TensorFlow, Keras, PyTorch, FastAPI, LangChain, LangGraph, MCP.
Tools & Platforms: Docker, Hugging Face, Claude AI, Codex AI Agent, Antigravity
Cloud & Databases: MongoDB, MySQL, Neo4j (GraphDB), Supabase

Experience

AI/ML Intern *Remote*
Mexilet Technologies Pvt. Ltd. Nov 2025 – Jan 2026

- Built an OCR pipeline to extract key information from real estate documents and brochures.
- Integrated AWS Bedrock to generate structured property content using LLMs.
- Used AWS Polly to convert generated scripts into natural speech for demo property videos.
- Developed an automated workflow to transform real estate data into voice-enabled video content.

Projects

MCP Router — *Graph RAG, ChromaDB, KuzuDB, Cross-Encoder, Sentence Transformers, LangChain* GitHub

- Developed a RAG-powered MCP Router that intelligently routes AI agent requests to relevant tools, reducing tool-schema token consumption by 98% across multiple MCP servers.
- Designed and implemented a 3-stage retrieval pipeline using ChromaDB (HNSW Vector Search), KuzuDB Graph Expansion, and Cross-Encoder Reranking, achieving high-accuracy tool selection with low latency.
- Built a multi-server orchestration framework supporting GitHub, Notion, Slack, and other MCP servers, enabling automated tool discovery, workflow planning, and execution.
- Engineered a zero-setup architecture with local embeddings (Sentence Transformers MiniLM), embedded vector/graph databases, and scalable abstractions for future integration with Neo4j, Pinecone, and enterprise AI systems.

AI Coding Agent — *LangGraph, Deep Agents, MCP, Neo4j GraphRAG, Docker, FastAPI* GitHub

- Built an autonomous coding agent that plans, designs, builds, commits and deploys software projects.
- Connected GitHub, Vercel, Render and Chrome DevTools through MCP, with a lint, test and browser-check loop that feeds errors back so the agent fixes its own code.
- Added Neo4j GraphRAG over the user's repository, with RAGAS checks to keep generated code grounded.
- Runs commands in an isolated Docker sandbox with human approval before any push or deploy, and works through a VS Code extension, browser UI, CLI and FastAPI.

Industrial Commerce Product AI Agent — *Hybrid RAG, LLMs, Vector Database, FastAPI, LangChain* GitHub

- Built a hybrid RAG-based AI agent that transforms raw, messy website product catalogs into rich, structured product descriptions and specifications.
- Used LlamaParse for document extraction and parsing, and LangSmith for end-to-end trace logging and evaluation.
- Built Playwright and BeautifulSoup-based scrapers to extract product data from website catalogs.
- Applied Deep Agents rubric middleware for self-evaluation, powered by the Grok API running GPT-OSS-120B and Qwen3.6-26B models.

Achievements & Certifications

- **Certifications:** AWS Cloud Foundations | AWS Machine Learning Foundation | Udemy Generative AI with LangChain and HuggingFace | Python Programming with Red Hat.
- **Activities:** Google Solution Challenge | GDGOC-CDGI Hackathon Bootcamp | Mind Coders Hackathon | GDGOC Codeology 2.0.
